PROFESSIONAL SUMMARY

I am highly motivated and enthusiastic individual with a passion for collaborative learning, growth and gaining experience. Proficient in critical thinking, analytical problem-solving, and team collaboration. I love practical tasks that require hands on and I am eager to apply the skills and knowledge that I have to drive meaningful impact in a dynamic and challenging environment.

PROJECTS

1. Friendly - Social Media Platform (<https://github.com/YAS-1/Friendly>)

Developed a real-time full-stack social media platform that supports secure user authentication, post creation, likes, comments, profile management, and instant messaging, using MongoDB, Express.js, React, Node.js, JWT authentication, and Socket.io for real-time communication.

2. NITACB – AI Support & Onboarding Chatbot (<https://github.com/YAS-1/NITACB>)

Developed a full-stack enterprise chatbot platform during my internship at National Information Technology Authority – Uganda to automate FAQ and ticket-driven support queries, streamline onboarding workflows, and provide organization-wide information access through a conversational interface, using JavaScript, Python, frontend-backend system design, chatbot workflow engineering, and knowledge-base integration.

3. Daystar_DayCare Management System (https://github.com/YAS-1/Daystar_Daycare)

Developed a role-based full-stack daycare management application that improved daycare administration through child registration, babysitter scheduling, attendance monitoring, incident management, and automated parent payment reminders using React, Node.js, Express.js, MySQL, JWT, Tailwind CSS, Chart.js,

4. EcoClassifier – AI-Powered Smart Waste Sorting and Analytics System (<https://github.com/YAS-1/EcoClassifierDefault---Copy>)

Built an AI-powered smart bin and web analytics platform that automatically classifies waste at the point of disposal into plastic, paper, and general waste using a VGG16 deep learning model, then actuates ultrasonic sensors, stepper motors, and servo motors via Raspberry Pi to route waste into the correct compartment. Developed a React-based dashboard and Node.js backend for real-time event logging, waste analytics, and system monitoring, using TensorFlow Lite, Raspberry Pi GPIO, React, Node.js, Express, and MongoDB.

5. VGG16-Based Waste Image Classification Model (<https://github.com/YAS-1/EcoClassifierDefault---Copy>)

Built and fine-tuned a VGG16 transfer learning image classification model for automated waste recognition, trained on labeled plastic and paper image datasets with preprocessing, augmentation, regularization, and performance evaluation pipelines. Optimized the model for edge deployment using

TensorFlow Lite, enabling real-time inference on Raspberry Pi-based embedded systems using Python, TensorFlow, Keras, OpenCV, NumPy, and TensorFlow Lite.

WORK EXPERIENCE

Inter at NITA-U (4 months)

During my time at National Information Technology Authority – Uganda, I was engaged in hands-on software development projects within the Directorate of e-Government Services, where I contributed to the development of an AI-powered support chatbot designed to answer FAQ- and ticket-based user queries, guide onboarding workflows, and provide important institutional information. I worked across both the frontend and backend, integrating Python chatbot logic with Node.js and React, implementing web scraping for context-aware responses, and researching AI platforms before successfully integrating the Mistral AI model through OpenRouter to improve fallback intelligence.

Beyond chatbot development, I was also involved in Drupal 11 CMS setup and customization, UI/UX wireframing, debugging system errors, and exploring national ICT infrastructure through exposure to the data center, CERT, and telecommunications sections. Through this experience, I strengthened my skills in full-stack development, AI integration, API workflows, CMS customization, debugging, teamwork, and problem-solving, while gaining valuable insight into how technology supports digital transformation in the public sector.

EDUCATION

<u>Institution</u>	<u>Certificate/Degree</u>	<u>Year</u>
Uganda Christian University	Bachelor's Degree of Science in Computer Science	2023 - 2026
Lubiri Secondary School	Uganda Advanced Certificate of Education (UACE)	2020-2022
Mengo Senior School	Uganda Certificate of Education (UCE)	2015-2019

OTHER CERTIFICATIONS

- **Cisco Networking Academy:** Certification in Introduction to IT Essentials
- **Alison Online Courses:** Certification in Introduction to Data Science
- **Linked In Learning:** Certification in Python for Data Science and Machine Learning Essentials
- **Google Online Courses:** Certification in Cybersecurity

TECHNICAL

- Web & Software Development (JavaScript, Python, TypeScript, React, NextJs, Tailwind, Wix, Docker)
- Data analysis and visualization (Python, Excel, Power Bi, Tableau, Jupyter)
- Machine Learning (Python, Jupyter, Google colab)
- Database programming (MySQL, MongoDB)

- Frameworks & Libraries (React, Next.js, Express.js, Node.js, TensorFlow, NumPy, Socket.io, Chart.js, etc)
- Version Control: Git, Github (repository management, branching, collaboration workflows)
- API Integration & Testing (Postman, RESTful API design and integration, backend endpoint development)
- Network Engineering (LAN)

SOFT SKILLS

- Communication
- Presentation
- Problem Solving
- Team work
- Time management

REFEREES

Mr. Nkurunungi Gideon	+256 752 364557,
Mr. Kasole Ahmed (Lecturer at UCU)	+256 780 573769,
Mr. Benard Mugumya (HR Officer at NITA-U)	+256 777 997258,
Mr. Nabasa Isaac	+256 751 839477
